

**qoncept's** vision is to develop outstanding software which supports digital transformation in the manufacturing industry. At qoncept we see every software project as an innovation towards process optimization. We believe that real innovation only happens when combining the spices of different engineering disciplines.

This is why we spice up with experts in metallurgy, software architecture, software development, UI & UX and data science.

Join our team to be infected by our passion to engineer innovation as a

## Lead Software Architect / Full Stack (m/f/x)

The spices of your new **challenge**:

- Designing the software architecture for a revolutionary software solution for the manufacturing industry
- Being the frontrunner to lead the software development process on fresh grounds
- Developing ideas and a product in a green field environment
- Building your team and assume responsibility for handpicked team members

You are ready to come onboard **because**:

- You are a professional in software development, ideally with a relevant university degree
- You have been acting as a lead architect for > 5y
- You are passionate to design software according to the latest trends
- You like working independently while sharing success in the team is even greater
- Ideally, you have been touching on the processing and manufacturing industry

Being a qoncept member brings the following **benefits**:

- Highly flexible working culture: working place and home office can be discussed
- Quick decision making processes – it is the success that counts, not who had an idea
- Succeeding with highly qualified product owners that bring >10y domain know-how
- Comprehensive employee benefits package with company sport and leisure events
- Modern offices, latest infrastructure and hardware
- Individual education and training program
- Annual bonus
